PROFILE SUMMARY

Computer Engineering student and software developer with experience in Java, Spring Boot, MERN stack, SQL, and AWS. Experienced in building RESTful APIs, database-driven applications and cloud-based systems. Strong problem-solving skills with hands-on experience developing and deploying scalable software solutions.

EDUCATION

B.E. in Computer Engineering , Fr. Conceicao Rodrigues College of Engineering, Mumbai Semester VII CGPA: 8.94/10	Expected 2027
Higher Secondary Certificate (HSC) , St. Andrew's College	2023 86.67%
Secondary School Certificate (SSC) , St. Anne's High School	2021 86.40%

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL

Frontend: React.js, HTML, Tailwind CSS

Backend & Databases: Node.js, Express.js, Spring Boot, MongoDB, MySQL

Cloud Platform: AWS (EC2, S3, IAM, Lambda, DynamoDB, SNS)

Tools: Git, GitHub, Postman

PROJECTS

BrightBuilds | MERN Stack, Render, Vercel, Cloudinary | [GitHub](#)

- Built and deployed a centralized project showcase platform connecting students, faculty and administrators through project submission and review workflows.
- Developed secure JWT-based authentication and role-based authorization to manage user access across multiple roles.
- Developed REST APIs for project management, approval workflows, comments, ratings, likes and notifications, using MongoDB for persistent data storage.

RecipeManager | Spring Boot, MySQL, Spring Data JPA, Spring AOP, Spoonacular API | [GitHub](#)

- Developed a backend application using Spring Boot and MySQL, integrating external REST APIs to manage dynamic data and user preferences.
- Implemented Spring AOP with a custom logging aspect to track controller method execution times and performance metrics.
- Designed the data persistence layer using Spring Data JPA to manage relational schemas and streamline database operations.

Cloud-Sentry | AWS Lambda, Amazon S3, DynamoDB, SNS, VirusTotal API | [GitHub](#)

- Developed an event-driven serverless pipeline using AWS Lambda and S3 triggers to compute SHA-256 hashes, automate threat logging in DynamoDB and broadcast real-time alerts via SNS.
- Implemented a Zero-Trust architecture using fine-grained IAM roles and resource-based bucket policies to enforce the principle of least privilege and isolate malicious uploads.

ACHIEVEMENTS

- **1st Place**, Tech-Mania 2K25 Hackathon
- **1st Runner-Up**, Oscillation 2K25 Hackathon
- **1st Place**, FullStack.AI Hackathon
